Abstract

The properties of neutral molecules Cs_2F_2 , Cs_3F_3 , and Cs_4F_4 , and positive and negative cluster ions Cs_2F^+ , CsF_2^- , Cs_3F_2^+ , Cs_2F_3^- , Cs_4F_3^+ , and Cs_5F_4^+ were studied by several of quantum chemical methods implementing density function theory and Möller–Plesset perturbation theory of second and fourth orders. For all species, the equilibrium geometrical structure and vibrational spectra were determined. Different isomers have been revealed for the trimer neutral molecule Cs_3F_3 ; pentaatomic, both positive and negative, Cs_3F_2^+ , Cs_2F_3^- ; and heptaatomic Cs_4F_3^+ ions. The most abundant isomers in the saturated vapour were determined. Enthalpies of dissociation reactions and enthalpies of formation of the species were obtained.

Keywords: caesium fluoride, cluster ions, quantum chemical methods, geometrical structure, vibrational spectra, enthalpies of formation
